

GitLab Health Check

Accelerate Cloud-Native Transformation with Adfinis

Is Your GitLab Setup **Built to Scale**?

Many organizations rely on GitLab as a mission-critical platform but overlook its ongoing optimization and alignment with business requirements. As teams grow and software delivery accelerates, ensuring high availability, performance, and security becomes more complex. Common issues often include:

- » Architecture gaps or lack of high availability
- » Performance bottlenecks and slow release cycles
- » Security vulnerabilities and misconfigurations
- » Inefficient workflows that hinder collaboration
- » Limited visibility into usage patterns and governance
- » Underutilized GitLab features leading to technical debt

The Adfinis GitLab Health Check is a proactive, expert-led assessment designed to uncover these challenges before they escalate. You'll receive actionable recommendations tailored to your environment, helping you optimize performance, improve reliability, and ensure long-term maintainability.

Why a **Health Check**?

Strengthen Resilience & Compliance

Gain full confidence in your GitLab environment with improved security, high availability, and governance — reducing risk and ensuring alignment with regulatory standards.

Maximize GitLab Value

Leverage all relevant features, streamline developer workflows, and eliminate redundant tooling to improve ROI and accelerate team productivity.

Scale for Growth

Prepare your platform for rapid team growth, faster release cycles, and strategic initiatives like DevSecOps transformation and cloud adoption.

A Solution Roadmap to **Maximize Platform Value**

Clarity & Confidence Through **Expert Assessment**

Gain critical insights with a workshop led by GitLab experts and in-depth interviews — uncovering technical and organizational blind spots across your GitLab platform, from infrastructure to usage patterns.

Actionable Intelligence with **Executive-Level Transparency**

Receive a concise Management Summary and detailed Health Check report presenting prioritized findings and best-practice recommendations — empowering IT leaders to make informed decisions with confidence.

Strategic Guidance to **Accelerate Adoption and Value**

Get a clear review of deployment and operations practices alongside feature adoption analysis, plus tailored propositions to help you unlock more value and scale your DevSecOps capabilities effectively.

Highlights

- » Workshop with GitLab experts, conducting interviews to shed light on technical and organisational aspects of your GitLab platforms
- » Management summary, including Health Check report
- » Presentation of prioritized findings including recommended best practices
- » Review from deployment and operations methodologies, as well as feature adoption of feature sets in use
- » Propositions how to get more value out of GitLab

Why Adfinis

Adfinis delivers independent GitLab expertise with no vendor bias. Our holistic approach covers both technical best practices and organizational enablement, ensuring rapid, sustainable outcomes.

As consecutive **GitLab Service Partner of the Year (2023 EMEA, 2024 APAC)**, we empower teams to:

- » Reduce risk
- » Accelerate delivery
- » Maximize ROI with GitLab

About **Adfinis**

At our locations in Switzerland, the Netherlands, Germany, Australia, New Zealand and Egypt, we employ a team of over a 150 employees, which is characterized by many years of experience, expertise and professionalism.

At Adfinis, the software developers work closely with the system engineers and the sales. This way, we cover a wide range of expertise and know how to combine the opportunities of innovation with the well-tried and tested of our work. In addition, we maintain intensive partnerships with leading providers, communities and manufacturers of Open Source technologies and solutions.
